1	(a)	(i)	[Able to state the name of the process correctly]  Answer : Haber Process // <i>Proses Haber</i>	1	1
		(ii)	[Able to write the chemical formula ammonia correctly]  Answer : NH <sub>3</sub>	1	1
		(iii)	[Able to state one condition correctly]  Answer : 450°C // 200 atm // iron // <i>ferum</i>	1	1
		(iv)	[Able to state the source of hydrogen correctly]  Sample answer : Natural gas // methane // <i>Gas asli</i> // <i>metana</i>	1	1
	(b)	(i)	[Able to state cleaning agent produced by saponification process correctly]  Answer : Cleaning agent A // <i>Agen pencuci A</i>	1	1
		(ii)	[Able to state which cleaning agent is more effective in hard water and give a reason correctly]  Sample answer : 1. Cleaning agent B // <i>Agen pencuci B</i> 2. Do not form scum / precipitate // <i>Tidak menghasilkan kekat / mendakan</i>	1 1	2
		(iii)	[Able to state which cleaning agent is more environmentally friendly and give a reason correctly]  Sample answer : 1. Cleaning agent A // <i>Agen pencuci A</i> 2. Biodegradable // Biological decomposed // <i>Terbiodegradasi</i> // <i>Terurai secara biologi</i>	1 1	2
<b>TOTAL</b>					<b>9</b>

2	(a)	[Able to give the meaning of empirical formula correctly] Answer : Chemical formula that shows the simplest whole number ratio of the atoms of the elements in a compound // <i>Formula kimia yang menunjukkan nisbah teringkas atom unsur-unsur dalam satu sebatian.</i>	1	1
	(b)	[Able to state the type of particle for the product formed in the experiment correctly] Answer : Ions // <i>Ion</i>	1	1
	(c)	[Able to give the reason why crucible lid need to be opened in a while correctly] Answer : To allow oxygen to enter the crucible for combustion // <i>Membenarkan oksigen masuk ke dalam mangkuk pijar untuk pembakaran</i>	1	1
	(d)	[Able to calculate the number of mole of magnesium, mass of magnesium oxide and value of X correctly]  1. Mole of magnesium 2. Mass of magnesium oxide with correct unit 3. Value of X  Sample answer : Mole of magnesium $= \frac{2.4}{24}$ // 0.1  Mass of MgO $= 0.1 \times 40$ // 4 g Value of X $= 21.6 + 4 = 25.6$	1 1 1	3
	(e)	[Able to state how to ensure the reaction complete correctly] Answer : Repeat the process of heating, cooling and weighing until constant mass is obtained // <i>Ulang proses pemanasan, penyejukan dan penimbangan sehingga jisim tetap diperoleh.</i>	1	1
	(f)	(i) [Able to determine whether the empirical formula of lead(II) oxide can be determined by using the same method correctly] Answer : Cannot // <i>Tidak boleh</i>	1	1
		(ii) [Able to give the reason correctly] Answer : Lead is less reactive towards oxygen // <i>Plumbum kurang reaktif terhadap oksigen</i>	1	1
		<b>TOTAL</b>		<b>9</b>

No.			Mark Scheme	Sub Mark	Total marks
3	(a)	(i)	[Able to state the type of bond in compound J correctly] Answer : Ionic bond // Ikatan ion	1	1
		(ii)	[Able to write the electron arrangement of atom X correctly] Answer : 2.8.2 / 2,8,2	1	1
		(iii)	[Able to write the chemical equation for the reaction between element X and element Y to form compound J correctly]  Answer : $X + Y_2 \rightarrow XY_2$ // $Mg + Cl_2 \rightarrow MgCl_2$	1	1
	(b)	(i)	[Able to choose atoms that can react to form the same type of compound as solvent used in cosmetic and medical correctly] Answer : Q and R // Q dan R	1	1
		(ii)	[Able to write the chemical formula of the compound formed correctly] Answer : $QR_4$	1	1
		(iii)	[Able to draw the electron arrangement of the compound formed in 3(b)(ii) correctly] 1. Correct number of atoms // Bilangan atom yang betul 2. Correct number of shells and electrons // Bilangan petala dan elektron yang betul	1 1	2

	(c) [Able to explain why the melting point of compound J is higher than the compound formed in 3(b)(i) correctly]  Sample answer: 1. Compound J has strong electrostatic force between ions // <i>Sebatian J mempunyai daya elektrostatik yang kuat antara ion</i> 2. Compound in 3(b)(i) has weak intermolecular force // <i>Sebatian dalam 3(b)(i) mempunyai daya antara molekul yang lemah</i> 3. More heat energy is needed to overcome the forces in compound J // Less heat energy is needed to overcome the forces in compound 3(b)(i) // <i>Lebih banyak tenaga haba diperlukan untuk mengatasi daya dalam sebatian J // Kurang tenaga haba diperlukan untuk mengatasi daya tarikan dalam sebatian 3(b)(i)</i>	1	1	3
